Universal Featherboard Pro

Magswitch Universal Featherboard Pro provides strong featherboard force against the table saw fence in either left handed or right handed positions. Wide base magnets and gaskets provide excellent grip even when placed over the table saw miter slot. Additionally two micro adjustable bump feet allow the tool to function as a versatile stop for cross cuts and slots.

Vertical Featherboard Pro

Magswitch Vertical Featherboard Pro is a table saw safety attachment which pushes the workpiece down against the table during feeding to prevent ride-up and kickback. Attach it to ferrous Biesemeyer-style table saw fences between the low-friction guide faces and adjust the feathers vertically to match the height of the workpiece. It can be paired with a second Pro Vertical featherboard for downward pressure on a work piece before and after the saw blade.

Universal Saw Indicator

Magswitch Miter Saw Indicator is used to measure alignment of the table saw blade relative to the table (and the miter slot) to allow fine adjustment of blade parallelism. When adjusting fence spacing relative to the blade, it can also be used to measure very small changes in fence parallelism. Attach it to steel cross fences (which ride in the miter slot) or to ferrous table saw tables. The indicator is attached via an adjustable slot, allowing it to slide to fit a wide variety of miter slot spacing.
